SEO Audit Report

Comprehensive Website Analysis

rankenstein.pro

69

SEO Health Score out of 100

Audit Date: February 8, 2026 | Business Type: SaaS | Framework: Next.js on Railway

moneyvipprogram.com

Table of Contents

1	Executive Summary	69/100
2	Site Overview & Screenshots	Visual
3	Technical SEO	72/100
4	Content Quality & E-E-A-T	62/100
5	On-Page SEO	78/100
6	Schema & Structured Data	72/100
7	Performance & Core Web Vitals	60/100
8	Images & Media	55/100
9	AI Search Readiness	45/100
10	Prioritized Action Plan	22 Items
11	Score Projection & Next Steps	93 Target

moneyvipprogram.com

1. Executive Summary

rankenstein.pro is a SaaS platform for AI-powered SEO content generation, built with Next.js and hosted on Railway. This audit evaluated 30 indexed URLs across 7 SEO dimensions, identifying **22 issues** across 4 severity levels.

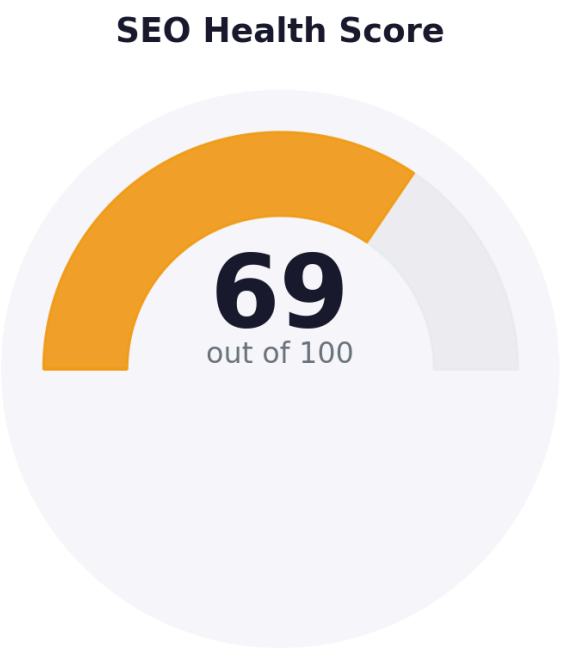

Figure 1: Overall SEO Health Score — 69/100 (Needs Work)

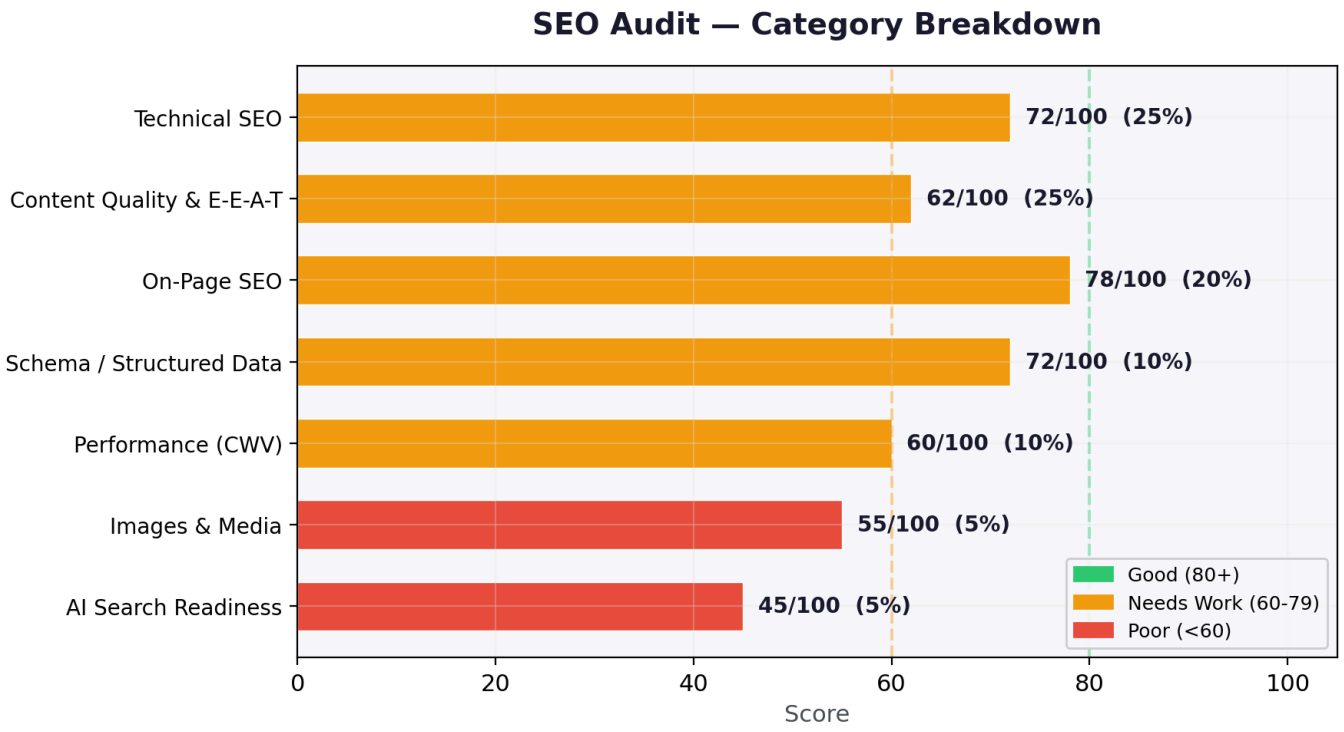

Figure 2: Score breakdown by category with weight percentages

moneyvipprogram.com

Key Findings at a Glance

3 Critical Issues (Blocking Indexing)

- Soft 404s returning HTTP 200 status on key routes (`/features` , `/login` , `/signup`)
- `www.rankenstein.pro` DNS not configured — times out completely
- FAQPage schema used on commercial site (restricted to gov/healthcare since Aug 2023)

5 High Priority Issues (Fix within 1 week)

- No individual author attribution — all posts use brand byline (E-E-A-T failure)
- `Cache-Control: private, no-cache, no-store` on all pages
- Testimonial photos from randomuser.me (fake stock imagery)
- Contradictory experience claims across pages (5 yrs to "two decades")
- All 6 blog posts bulk-published on January 10, 2026

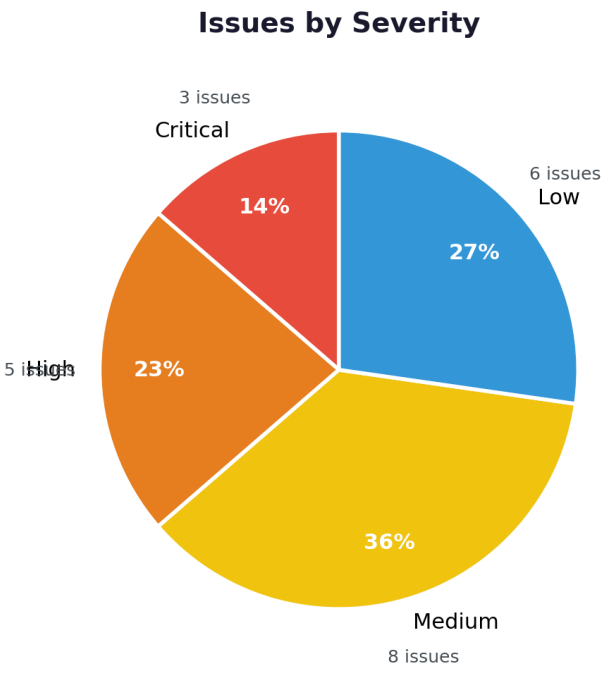

Figure 3: Distribution of 22 issues by severity

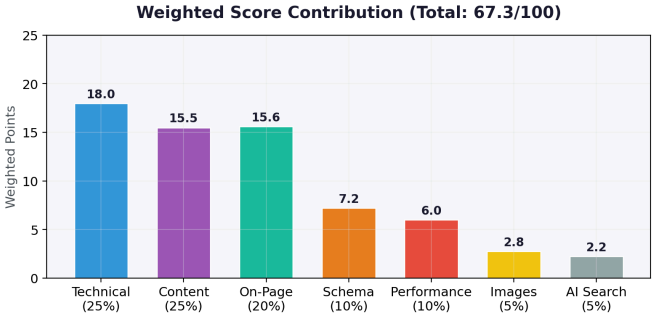

Figure 4: Weighted point contribution per category

moneyvipprogram.com

Category	Weight	Score	Weighted	Status
Technical SEO	25%	72/100	18.0	NEEDS WORK
Content Quality & E-E-A-T	25%	62/100	15.5	NEEDS WORK
On-Page SEO	20%	78/100	15.6	NEEDS WORK
Schema / Structured Data	10%	72/100	7.2	NEEDS WORK
Performance (CWV)	10%	60/100	6.0	NEEDS WORK
Images & Media	5%	55/100	2.75	POOR
AI Search Readiness	5%	45/100	2.25	POOR
Total	**100%**		**67.3 → 69**

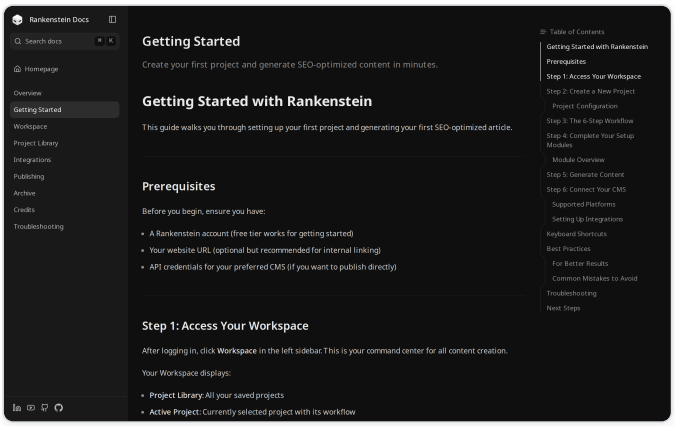

Figure 9: Documentation — Getting Started

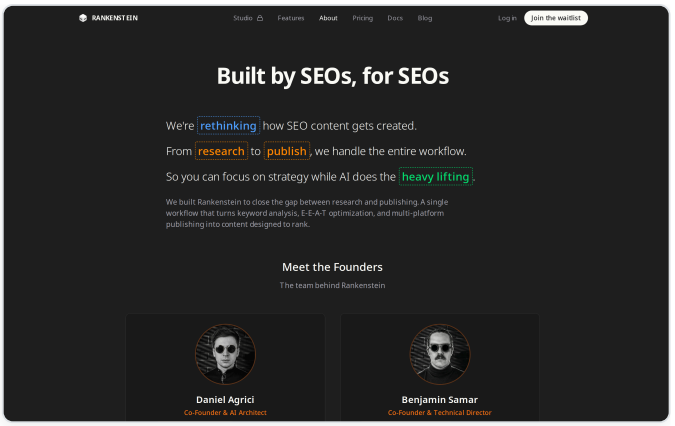

Figure 10: About page

Soft 404 Evidence

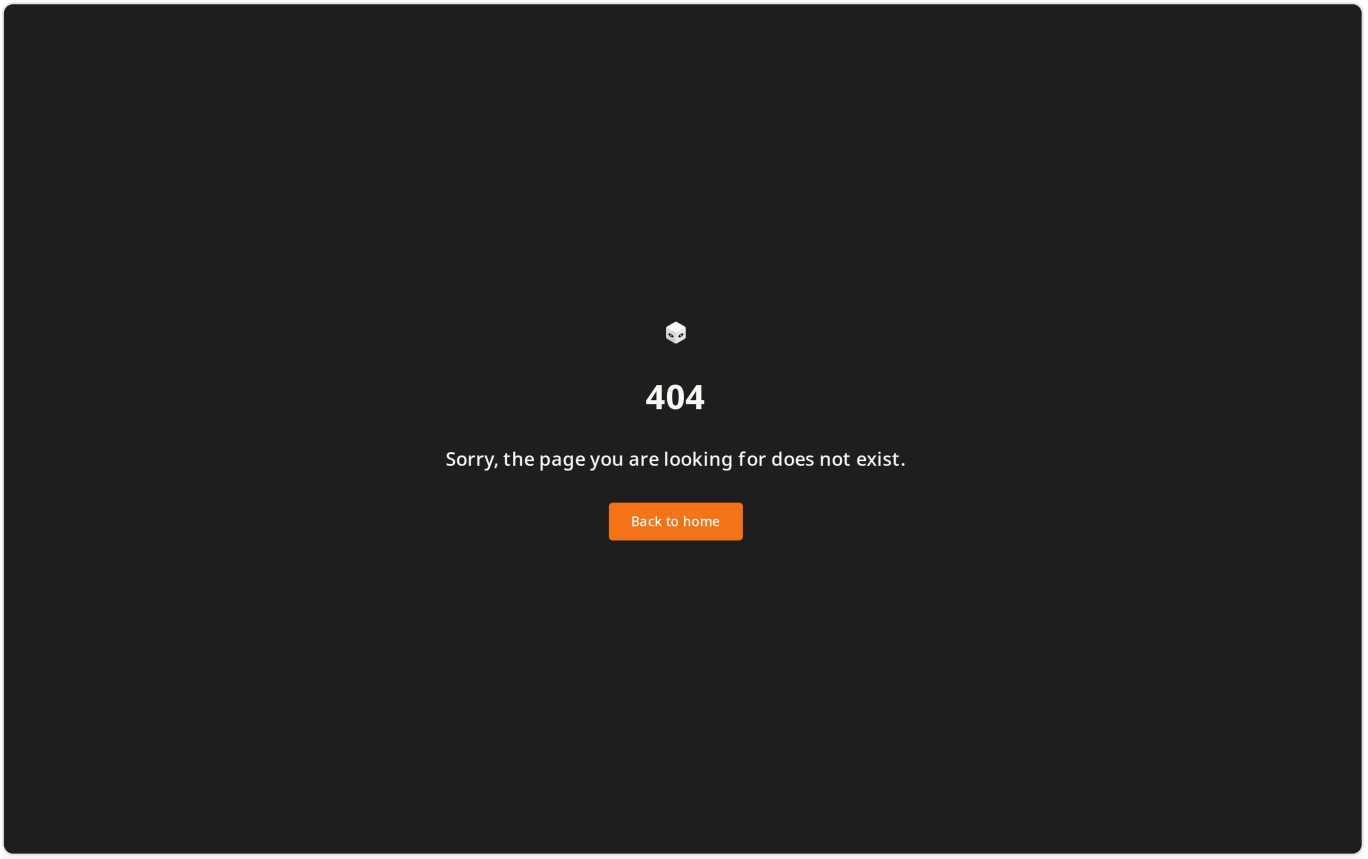

Figure 11: Non-existent URL returns HTTP 200 with empty SPA shell instead of proper 404

moneyvipprogram.com

3. Technical SEO

72/100

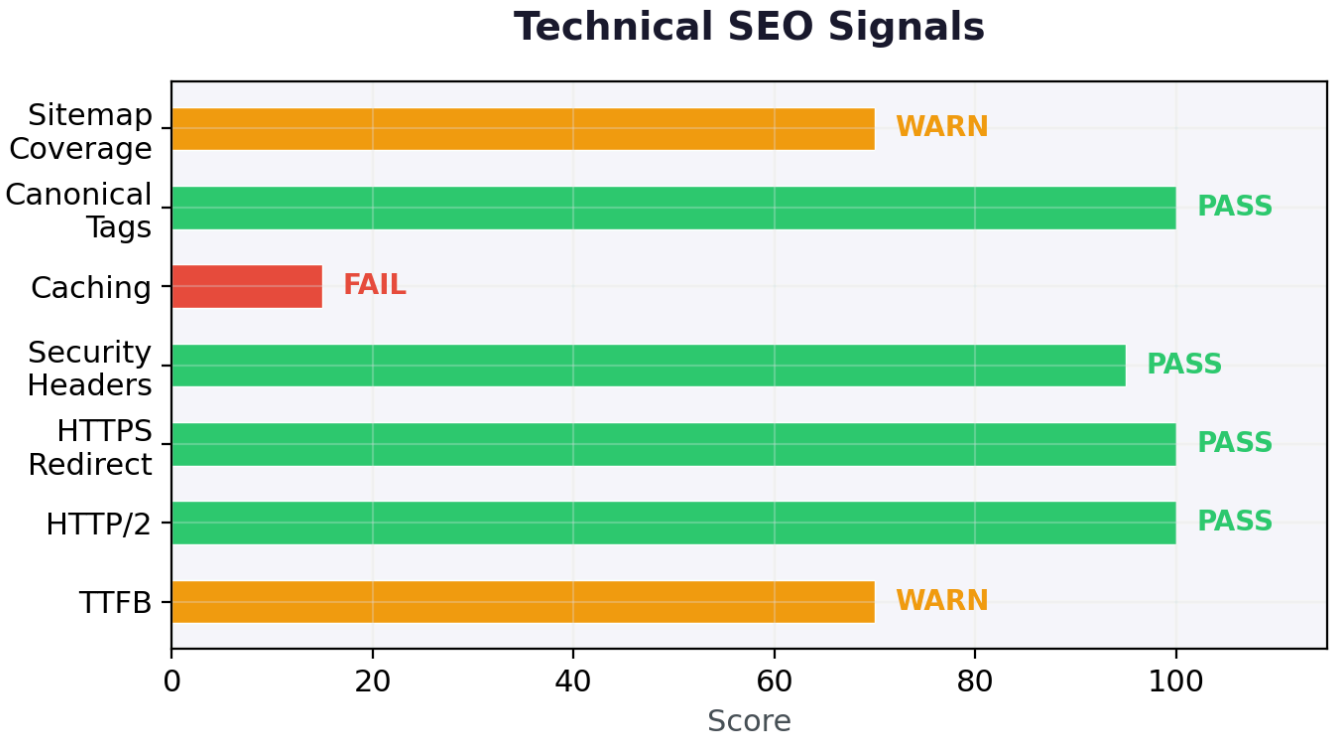

Figure 12: Technical SEO signal pass/warn/fail status

What's Working

Passing Checks

- PASS HTTPS enabled with proper 301 redirect from HTTP
- PASS HTTP/2 protocol active
- PASS Excellent security headers (CSP, HSTS with preload, X-Frame-Options, X-Content-Type-Options, Permissions-Policy)
- PASS `robots.txt` present and properly configured
- PASS XML sitemap at `/sitemap.xml` (30 URLs)
- PASS All canonical tags match sitemap URLs
- PASS No noindex conflicts in sitemap

moneyvipprogram.com

Critical Issues

CRITICAL **Soft 404s Returning HTTP 200**

Routes like `/features`, `/login`, `/signup`, and non-existent pages return HTTP 200 status with a ~109KB empty SPA shell (no title, no meta, no content). Google will attempt to index these blank pages, wasting crawl budget and diluting site quality signals.

Impact: Googlebot sees these as real pages with thin content. This wastes crawl budget and can trigger a sitewide thin content assessment.

Fix: Configure Next.js to return proper 404 status codes for non-existent routes. Use `notFound: true` in `getServerSideProps` or custom `not-found.tsx` with proper status codes.

CRITICAL **www Subdomain DNS Not Configured**

`www.rankenstein.pro` has no DNS record — connection times out completely. Users who type the www prefix get an error page.

Fix: Add a CNAME record for `www.rankenstein.pro` pointing to Railway, with a 301 redirect to the non-www canonical.

Other Issues

Issue	Severity	Details
Cache-Control: no-cache on all pages	HIGH	`private, no-cache, no-store` — forces full re-download on every visit. No edge caching possible.
Multiple H1 tags	MEDIUM	Homepage and docs/getting-started each have 2 H1 elements.
23/30 sitemap URLs missing lastmod	MEDIUM	Without lastmod, search engines can't prioritize recently updated content.
Missing pages in sitemap	MEDIUM	`/changelog`, blog category pages, and `/seo-in-2026` not included.

moneyvipprogram.com

4. Content Quality & E-E-A-T

62/100

Evaluated against Google's September 2025 Quality Rater Guidelines update, which extends E-E-A-T assessment to all competitive queries. Content quality score: 68. E-E-A-T score: 52. Blended: 62/100.

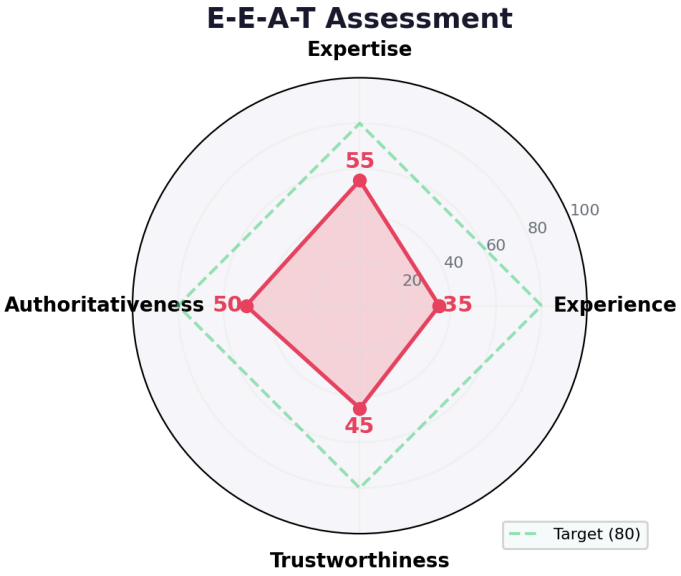

Figure 13: E-E-A-T dimension assessment vs. target score of 80

What's Working

Positive Signals

- Homepage has a clear value proposition and structured sections
- Blog posts cover relevant industry topics (SEO, AI content, E-E-A-T)
- Pricing page present with tier comparison
- Documentation section exists with getting-started guide

Critical Content Issues

HIGH **All 6 Blog Posts Bulk-Published Same Day**

Every blog post was published on January 10, 2026 — no new content in 29 days. Google's freshness signals interpret this as a content dump rather than active editorial publication. This is a strong negative E-E-A-T signal.

HIGH **No Individual Author Attribution**

All posts use "Rankenstein" as the byline with no real person behind the content. Without named authors with bios, credentials, and `sameAs` links, the site fails the Experience and Expertise dimensions of E-E-A-T.

moneyvipprogram.com

Trust Signal Issues

Issue	Severity	Details
Contradictory experience claims	HIGH	"5 years," "15 years," "two decades," "15+ combined," "25+ combined" across different pages
Fake testimonial photos	HIGH	Images sourced from `randomuser.me` — discoverable via reverse image search
Unverifiable statistics	MEDIUM	"312% average traffic increase" and "47 ranking factor analysis" without methodology or sources
Gmail contact address	MEDIUM	`rankensteinpro@gmail.com` instead of domain email. Also: dual addresses with `editorial@rankenstein.ai`
Vague pricing metrics	LOW	No concrete deliverables per tier — users can't evaluate value

moneyvipprogram.com

5. On-Page SEO

78/100

On-page elements are generally well-implemented with room for improvement in meta descriptions and heading structure.

What's Working

Positive Signals

- PASS Title tags present on most pages with keyword inclusion
- PASS Meta descriptions present on most pages
- PASS Logical heading hierarchy (aside from dual H1s)
- PASS Internal linking between blog posts and features
- PASS Open Graph tags present across the site

Issues Found

Issue	Severity	Details
Pricing page meta description	MEDIUM	Only 55 characters (minimum: 120, target: 120-160). Missing keywords and CTA.
Multiple H1 tags	MEDIUM	Homepage (2 H1s) and docs/getting-started (2 H1s). One H1 per page recommended.
Blog og:type incorrect	MEDIUM	Blog posts use `og:type="website"` instead of `og:type="article"`.
Title tag keyword positioning	LOW	Some pages could better front-load primary keywords in title tags.

moneyvipprogram.com

6. Schema & Structured Data

72/100

What's Working

Detected Schema Types

- PASS Organization schema with name, URL, logo
- PASS WebSite schema with SearchAction for sitelinks
- PASS Article schema on blog posts with headline, datePublished, author
- PASS JSON-LD format used (Google recommended)

Critical Schema Issues

CRITICAL **FAQPage Schema on Commercial SaaS**

Since August 2023, Google restricts FAQ rich results to government and healthcare authority sites only. Using FAQPage schema on a commercial SaaS site will be ignored and may signal over-optimization to Google's systems.

Fix: Remove all FAQPage/Question/Answer structured data. Present FAQ content as regular HTML with heading anchors instead.

Missing & Incorrect Schema

Issue	Severity	Recommendation
Redundant global schema	MEDIUM	Organization + WebSite schema repeated on every page. Load only on homepage.
Missing BreadcrumbList	MEDIUM	4 of 5 audited pages lack breadcrumb structured data.
Blog author is brand name	MEDIUM	Author should be a Person entity with credentials, not "Rankenstein".
Missing SaaS schemas	LOW	No WebApplication, SoftwareApplication, AboutPage, or ProfilePage schema.
No TechArticle on technical posts	LOW	Technical blog posts should use TechArticle instead of generic Article.

moneyvipprogram.com

7. Performance & Core Web Vitals

60/100

> **Note: Limited Performance Data**
>
> PageSpeed Insights API returned HTTP 429 (rate limited) during this audit. Performance score is estimated from available signals (TTFB, headers, resource analysis) rather than lab measurements.

Measured Signals

Metric	Value	Target	Status
Time to First Byte (TTFB)	408ms	<200ms (edge CDN)	ACCEPTABLE
HTTP/2	Enabled	Enabled	PASS
Font Preloading	4 woff2 fonts	Preloaded	PASS
Browser Caching	Disabled	Enabled	FAIL
CDN / Edge Serving	Single origin	Edge network	FAIL

Core Web Vitals Thresholds (Reference)

Metric	Good	Needs Improvement	Poor
Largest Contentful Paint (LCP)	≤ 2.5s	2.5s – 4.0s	> 4.0s
Interaction to Next Paint (INP)	≤ 200ms	200ms – 500ms	> 500ms
Cumulative Layout Shift (CLS)	≤ 0.1	0.1 – 0.25	> 0.25

Issues

HIGH **Zero Browser/CDN Caching**

`Cache-Control: private, no-cache, no-store` on all responses. Every page load re-fetches all resources from origin. This directly impacts LCP and overall load times.

Fix: Set `Cache-Control: public, max-age=31536000, immutable` for static assets. Use `s-maxage=3600, stale-while-revalidate=86400` for HTML.

moneyvipprogram.com

8. Images & Media

55/100

What's Working

Positive Signals

- PASS Open Graph image present on all pages
- PASS Font preloading properly configured (4 woff2 files)

Issues

Issue	Severity	Details
OG image dimensions	MEDIUM	Current: 1000x1000 PNG. Optimal: 1200x630 for social sharing.
Logo file size	LOW	124KB PNG — could be 10-20KB as optimized WebP or SVG.
Fake testimonial photos	HIGH	Stock photos from `randomuser.me`. Reverse-image searchable.
No next-gen image formats	LOW	No WebP/AVIF detected. Modern formats reduce file size 25-50%.

moneyvipprogram.com

9. AI Search Readiness

45/100

AI-powered search (Google AI Overviews, ChatGPT web search, Perplexity) increasingly drives traffic. Sites that are easily citable and verifiable get preferential treatment in AI-generated answers.

What's Working

Positive Signals

- Structured content with clear headings (good for passage extraction)
- Topic-relevant blog content on SEO subjects

Issues

Issue	Severity	Details
No `llms.txt` file	LOW	No machine-readable site description for AI systems.
No AI crawler directives	LOW	No GPTBot, ClaudeBot, or PerplexityBot rules in robots.txt.
Fake author profiles reduce citability	HIGH	AI systems prioritize content with verifiable expertise for citations.
Statistics without sources	MEDIUM	Unsourced claims unlikely to be cited by AI search systems.
No passage-level markup	LOW	Content not structured for featured snippet or AI Overview extraction.

moneyvipprogram.com

10. Prioritized Action Plan

22 issues organized by severity. Addressing Critical and High items will improve the score from 69 to an estimated 84.

CRITICAL — Blocks Indexing / Immediate SEO Harm

#	Issue	Impact	Fix
1	**Soft 404s returning HTTP 200**	Google indexes blank pages, wastes crawl budget	Return proper 404 status for non-existent routes. Ensure `/features`, `/login`, `/signup` have real content or return 404.
2	**www subdomain DNS missing**	Users get connection errors; link equity loss	Add CNAME for `www`, 301 redirect to non-www canonical.
3	**Remove FAQPage schema**	Restricted to gov/healthcare; signals over-optimization	Delete FAQPage structured data. Present FAQ as HTML with anchors.

HIGH — Fix Within 1 Week

#	Issue	Fix
4	**Add real author profiles**	Create author pages with Person schema, bio, credentials, headshot, sameAs links.
5	**Fix caching headers**	`max-age=31536000, immutable` for static assets. `s-maxage=3600` for HTML.
6	**Replace fake testimonial photos**	Use real customer photos or initials-based avatars. Remove randomuser.me dependencies.
7	**Fix contradictory experience claims**	Audit all pages for consistency. Use one verifiable claim site-wide.
8	**Establish publishing cadence**	Stagger blog dates. Publish 1-2 new posts per week to show editorial activity.

moneyvipprogram.com

MEDIUM — Fix Within 1 Month

#	Issue	Fix
9	Add BreadcrumbList schema	JSON-LD breadcrumbs on all pages except homepage.
10	Add WebApplication schema	SaaS-specific schema with offers, features, browser requirements.
11	Fix multiple H1 tags	One H1 per page. Demote secondary headings to H2.
12	Fix pricing meta description	Expand to 120-160 characters with keywords and CTA.
13	Add lastmod to sitemap	Add accurate `<lastmod>` dates to all 30 entries.
14	Add missing pages to sitemap	Include `/changelog`, blog categories, missing blog posts.
15	Fix OG image dimensions	Create 1200x630px landscape OG image. Set og:type="article" on blogs.
16	Use professional contact email	Replace Gmail with `contact@rankenstein.pro` domain email.

LOW — Backlog

#	Issue	Fix
17	Add llms.txt	Machine-readable site description at `/llms.txt`.
18	Add AI crawler directives	Explicit rules for GPTBot, ClaudeBot, PerplexityBot in robots.txt.
19	Optimize logo	Convert 124KB PNG to WebP (<20KB) or SVG.
20	De-duplicate global schema	Organization + WebSite schema only on homepage.
21	Consider edge CDN	Deploy to Vercel/Cloudflare or enable Railway CDN for edge serving.
22	Add source citations	Link statistics to case studies or third-party validation.

moneyvipprogram.com

11. Score Projection & Next Steps

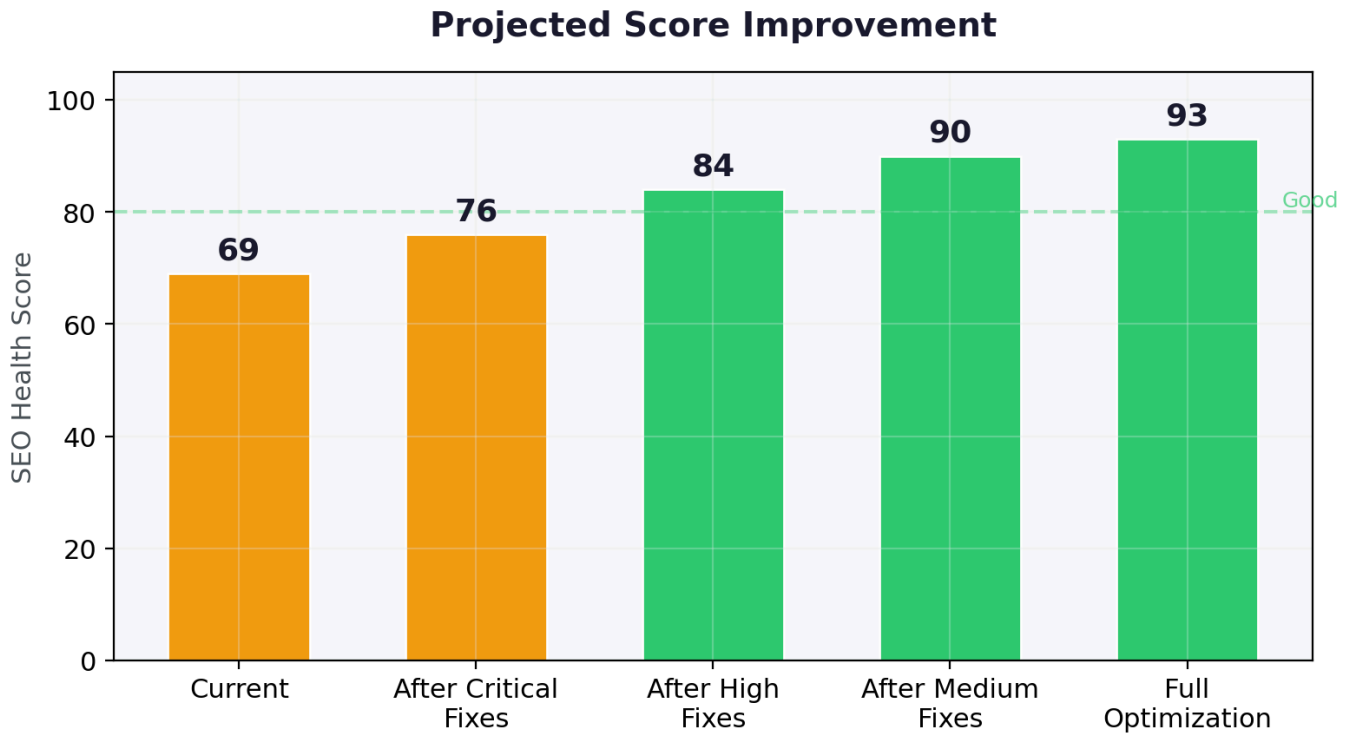

Figure 14: Projected SEO Health Score improvement after each fix phase

Phase	Projected Score	Actions
Current	**69/100**	Baseline
After Critical fixes	~76/100	Fix soft 404s, www DNS, remove FAQPage schema
After High fixes	~84/100	+ Real authors, caching, testimonials, publishing cadence
After Medium fixes	~90/100	+ Schema, meta descriptions, sitemap, OG images
Full Optimization	~93/100	+ AI search readiness, logo, CDN, citations

Recommended Immediate Next Steps

1. **Fix soft 404s this week** — This is the single highest-impact fix. Google is currently indexing blank pages.
2. **Configure www DNS and caching headers** — Quick infrastructure wins with no code changes to content.
3. **Create at least one real author profile** — Start building E-E-A-T signals immediately.
4. **Publish one new blog post** — Break the 29-day content drought.
5. **Remove FAQPage schema** — Quick code change that eliminates a negative signal.

SEO Audit Report generated on February 8, 2026
Methodology: 7-dimension weighted scoring (Technical 25%, Content 25%, On-Page 20%, Schema 10%, CWV 10%, Images 5%, AI Search 5%)
Data sources: Live crawl, header analysis, HTML inspection, schema validation, Playwright visual capture
